IN THE HEART OF THE DARK TOBACCO BELT

APPOMATTOX, VIRGINIA

ESTABLISHED 1892

CALVIN H. ROBINSON EDITOR AND PUBLISHER
Member Virginia Press Association

Entered as second-class matter at the Post Office at Appomattox, Va., under Act of Congress of March 3, 1879.
Address all correspondence to The Times-Virginian, Appomattox, Va. Subscription Rate: \$1.50 a year; five six months; less than six months, 50c per copy. Payable in advance. Advertising rates on request.

Editorial Comment

What Other Papers Say:

Soviet Conduct in Reich

From Danville Register

The first comprehensive dispatch dealing the attitude of the Russian soldiers towards German civilians has been received. It answers a pertinent question—whether or not the fierce hatred of the average Russian toward the Germans, which has been expressed in the form of excesses and reprisals, also gives the lie to the famous Gorchakov line of the "Red" which pictures of what will happen to Germans in a case of invasion are so glibly and so confidently pronounced.

It also gives the lie to the famous Gorchakov line of the "Red" which pictures of what will happen to Germans in a case of invasion are so glibly and so confidently pronounced.

Aside from attempting to spur the fighting zeal of the Germans, the propaganda is intended, in line with old Nazi technique, to excite to the enemy, in the East and the West, the same practices of which the German soldier is guilty.

It may be stated that the Russians are treating the German civilians as they would treat the enemy. But the Germans have never shown any such attitude toward the enemy.

Where the Germans have adopted of a leveling attitude towards the Russians, the latter have ignored it. Russian soldiers have been instructed not to converse with German civilians except where it became necessary in giving orders. The treatment of the German civilians is a reflection of the attitude of the German people.

The Russians appear to have adopted a sound policy. Where German towns and cities offer no resistance, the Soviet will take over without bombardment. Where the Germans show a disposition to offer resistance, the Soviet will take over by force.

This attitude is different to what the world expected. It has been felt that the Russians having suffered so terribly at the hands of the Germans in the earlier stages of the war would apply the Moslem law of retaliation.

It is interesting to note that the Russians appear to be making the broad distinction between the people of Germany and the political overlords who have directed their movement for so long.

Regulation Essential
From Blackstone Courier-Record

There is a lot of nonsense being written in the United States about a "free" system of "free competition" without government regulation or restraint upon the economic ambitions of business organizations.

To hear these spellbinders, one would conclude that the nation should abolish all regulatory legislation and permit free-living, free profit, the average citizen, seldom seems to think of the consequences of business regulation set up by the government has been instigated by business for their own profit.

There is something of a lesson to be learned from the regulations that have become necessary to promote automobile and airplane traffic. The individual driver of a motor car is not free to do as he pleases on the highway. He is subject to regulations designed to protect him and to safeguard the rights of others. The same observation applies to the air.

We doubt if any person would contend that automobile and airplane traffic would be improved by a system that permitted each driver to operate with complete freedom. Nor do we believe that the economic condition of the nation would be improved by permitting business to operate without regulations or restrictions.

The Memory of Lincoln
From Peninsula Enterprise

The memory of Abraham Lincoln was already being forgotten. He was a grand exponent of democracy, and he stood for principles of unity that would have gone far to remove sectional divisions. As one who rose from a poor boy to a great leader, he suggests that everybody should have a fair chance at success.

CIVILIANS AT WAR

Your Government needs and asks its citizens in this 16th week of the war to:

1. Keep your car in good repair. Make it last.
2. Start work now on your income tax return. File it as soon as possible.
3. Be one of those donating 100,000 pints of blood to meet the week's quota for wounded servicemen.

The Spirit of Lincoln

From New York Times

There is a striking parallel between the situation of this country at the present moment and at the time of Abraham Lincoln's second inaugural address, just four score and six years ago.

When the Civil War ended, he advocated the idea of the settlement of these issues "with malice toward none and charity toward all."

When the Civil War ended, he advocated the idea of the settlement of these issues "with malice toward none and charity toward all."

When the Civil War ended, he advocated the idea of the settlement of these issues "with malice toward none and charity toward all."

Machinery Revolutionized

World's Farming Methods

Up until 1930, farming methods had changed so much as they had been in the days of Julius Caesar, and humanity continued to suffer from inadequate food supplies. The change from horse-drawn plows to motorized plows had marked agriculture's chief mechanical progress.

Most of the farm machinery which has done so much to revolutionize the world's agriculture originated in the United States. The reaper was invented in 1831, the mowing and threshing machine in 1851, the first combine in 1889. These implements reduced the time required to harvest an acre of wheat from 35 man hours to less than 12.

Today various labor-saving machines on U. S. farms are estimated to number in excess of 10 million. Further, this same mechanism of farming methods has been extended to practically every land, through the export of American machines. Before the war, U. S. manufacturers exported approximately 125 million dollars worth of farm machinery a year, a fourth going to Europe. Farm implements factories in the United States produced 1,200 in number, have made a direct contribution to the war, turning out war machines and guns. Some of the larger factories have been engaged 75 per cent in war work.
